

A Mother's Love

There are times a Mother's Love
can understand your tears.
Can soothe your disappointments
and calm all your fears.

There are times when only a Mother's Love
can share the joy you feel.
When something you've dreamed about
quite suddenly is real.

There are times when only a Mother's Faith
can help you on life's way.
And inspire in your confidence
you need from day to day.

For a Mother's heart and a Mother's joy
were fashioned by the angels
and sent from God above.

MEMORIAL DAY

As we grow up, we learn that even the one person that wasn't supposed to ever let you down probably will. You will have your heart broken probably more than once and it's harder every time. You'll break hearts too, so remember how it felt when your was broken. You'll fight with your best friend. You'll blame a new love for things an old one did. You'll cry because time is passing too fast, and you'll eventually lose someone you love. So take too many pictures, laugh too much, and love like you've never been hurt because every sixty seconds you spend upset is a minute of happiness you'll never get back.

Dates:

May 5th
Cinco de Mayo

May 8th
Mother's Day

May 11th & 25th
Fiscal Court

May 21st
Armed Forces Day

May 30th
Memorial Day

Clark County Fiscal Court
News & Safety Letter

May is the time of year when we are out in our yards gardening, mowing, cutting down trees and etc. When moving things you have to be very careful with lifting up rocks, removing stumps, tires with water in them, and other things that snakes, mosquitos and other rodents that could be lurking around.

Snakes

About 5,000 snake bite cases are reported every year in the U.S. A bite from a venomous snake can be deadly, and should always be treated as a medical emergency. Even a bite from a harmless snake can be serious, leading to an allergic reaction or an infection.

Venomous snake bites can produce an array of symptoms, including localized pain and swelling, convulsions, and nausea—even paralysis.

Prevention of Snake Bites

Snake bites can be prevented in many cases. Refrain from approaching or handling snakes in the wild. Avoid areas of tall grass and piled leaves, as well as rock and woodpiles. These are typical places in which snakes like to hide.

When working outside where snakes may be present, wear tall boots, long pants, and leather gloves. Avoid working outside during the night and in warmer weather, which is when snakes are most active.

What we know about the Zika virus.

- No vaccine exists to prevent Zika virus disease (Zika).
- Prevent Zika by avoiding mosquito bites (see below).
- Mosquitoes that spread Zika virus bite mostly during the daytime.
- Mosquitoes that spread Zika virus also spread dengue and chikungunya viruses.

Zika virus, which is spread to people primarily through the bite of an infected mosquito. The most common symptoms of Zika are fever, rash, joint pain, and conjunctivitis (red eyes). The illness is usually mild with symptoms lasting for several days to a week after being bitten by an infected mosquito. People usually don't get sick enough to go to the hospital, and they very rarely die of Zika. For this reason, many people might not realize they have been infected. However, Zika virus infection during pregnancy can cause a serious birth defect called microcephaly, as well as other severe fetal brain defects. Once a person has been infected, he or she is likely to be protected from future infections.
